- **All natural ingredients**
- **Not tested on animals**

4 OZ. Jar

MSRP **\$39.95 ea.**

Our VariClear varicose vein and spider vein treatment is a safe, inexpensive alternative to surgery, that will work for any woman or man who suffers from varicose or spider veins.

As many as 60% of all American women and men suffer from some form of vein disorder, but women are more affected - up to 50% overall. It is also estimated that 41% of all women will suffer from abnormal leg veins by the time they are in their 50s.

Varicose veins are very swollen and raised above the surface of the skin. They are dark purple or blue in color, and can look like cords. They can look twisted and bulging. They are found most often on the backs of the calves or on the inside of the leg, anywhere from the groin to the ankle.

Spider veins are similar to varicose veins, but they are smaller, are often red or blue in color, and are closer to the surface of the skin than varicose veins. They can look like a tree branch or spider web with their short jagged lines. Spider veins can be found on both the legs and the face. They can cover either a very small or very large area of skin.

This advanced treatment lotion can not only strengthen vein walls, it helps boost circulation and can diminish the appearance of the veins. In addition to rutin, citrus bioflavonoid (Vitamin P) and grapeseed extract, we've added a potent hesperidin complex (a different form of Vitamin P). These ingredients have been clinically proven successful in the treatment of vascular degeneration. While some lotions dilute their extract with lactose or maltodextrin, our PURE hesperidin is 100% lemon peel. Furthermore, we include a special horse chestnut extract: very significant in promoting vein strength and integrity. Our horse-chestnut extract contains 90% escin. It is the active ingredient in our formula to help aid circulation. It even helps combat the swelling of ankles and lower legs.
